# Applying Safari 20 SG by Soil Drench - Master Batch 

| IMPORTANT |
| :---: |
| Use the specially marked measuring cup that comes with your |
| purchase of Safari to me sure the required amount of product and a |
| regular measuring cup to measure the amount of water. Note that the |
| numbers printed on the special measuring cup refer to ounces of weight |
| of Safari 20 SG and are pot the same as fluid ounces of volume in a |
| reqular measuring cup. |

CONVERSION FACTOR
If you don't have the special measuring cup, you can use
a regular measuring cup with the following conversion
factor for Safari 20 SG:
8 fl. oz. by volume in a regular measuring cup
$=4$ oz. by weight in the Safari measuring cup.
$=4 \mathrm{oz}$. by weight in the Safari measuring cup.
Step 1. To make a master batch of treatment mixture, put the required amount of water in a mixing container first. Warm water works best Then add the corresponding amount of product shown in the Mixing chart below and shake well until all treatment mater al is dissolved.

| MIXING THE MASTER BATCH |  |
| :---: | :---: |
| $\boldsymbol{\text { Amount of Product }}$ | Amount of Water |
| 3.5 ounces | 32 fluid ounces ( qt) |
| 7 ounces | 64 fluid ounces (2 qts) |
| 10.5 ounces | 96 fluid ounces (3 qts) |
| 12 ounces | 110 fluid ounces |
| 14 ounces | 128 fluid ounces ( 1 gal) |

Step 2. Measure the trunk diameter of the tree at breast height. This is called "inches dbh."
Step 3. Rake back any leaf litter, needle duff or debris from the base of the tree so that bare soil is accessible. At a distance of no more than 12 inches from the base of the tree, use a piece of rebar to make one hole in the soil for each inch of trunk diameter. The holes should be evenly spaced around the tree and no deeper than 2-4 inches. Placing the treatment mixture very close to the trunk, up against the big roots, and in the sinuses between the roots helps speed absorption.
Note: For trees that are smaller than 4 inches in diameter, make a minimum of 4 shallow holes around the tree.
Step 4. Treatment is done on an individual tree basis. Use the Dosing table below to determine how many ounces of treatment mixture the tree needs by multiplying its trunk diameter by the number of ounces shown in the right-hand column.

| DOSING EACH TREE |  |
| :---: | :---: |
| Inches (DBH) | Oz of TREATMENT MIXTURE PER INCH DBH |
| $1-15$ | 1 ounce |
| $16-19$ | 1.33 ounces |
| $20-23$ | 1.67 ounces |
| $24-27$ | 2 ounces |
| $28-31$ | 2.33 ounces |
| $32-35$ | 2.67 ounces |
| $36-39$ | 3 ounces |
| 40 or greater | 3.33 ounces |

Step 5. Use a regular measuring cup to measure out exactly the required amount of treatment mixture for the tree and put it into a larger pouring container. Then add more water to the pouring container to make it easier to distribute the material evenly around the tree, as follows:

For trees up to 12 " in diameter, add one gallon of water.
Add one more pint of water for every inch of diameter over 12.
Step 6. Pour the treatment mixture into the holes and all around the base of the tree slowly to avoid runoff and be sure to use it all up on the intended tree. When you're finished treating each tree, mark it to indicate it's been treated. Give the treatment time to dry before children or pets are allowed in the area.

## Applying Safari 20 SG by Soil Drench - Small Custom Batch

## IMPORTANT

Use the specially marked measuring cup that comes with your purchase of Safari to measure the required amount of product and a regular measuring cup to medsure the amount of water. Note that the numbers printed on the special neasuring cup refer to ounces of weight of Safari 20 SG and are not the same as fluid ounces of volume in a regular meessuring cup.

## CONVERSION FACTOR

If you don't have the special measuring cup, you can use a regular measuring cup with the following conversion factor for Safari 20 SG:

8 fl . oz. by volume in a regular measuring cup $=4 \mathrm{oz}$. by weight in the Safari measuring cup.

Step 1. Measure the trunk diameter of the tree at breast height. This is called "inches dbh."
Step 2. To make a small custom batch of treatment mixture, put the required amount of water in a mixing container first. Refer to the chart below. Warm vater works best.

Step 3. Then add the corresponding amdunt of product shown in the chart below and shake until all treatment material is dissolved.

|  |  |  |  | MIXING \& DOSING |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Inches (DBH) | Amount of Product <br> PER INCH | Amount of Water <br> PER INCH |  |  |  |
| $1-15$ | $0.1 \mathrm{oz}=3$ grams | 2 fluid ounces |  |  |  |
| $16-19$ | $0.133 \mathrm{oz}-4$ grams | 2 fluid ounces |  |  |  |
| $20-23$ | $0.167 \mathrm{oz}=5$ grams | 2 fluid ounces |  |  |  |
| $24-27$ | $0.2 \mathrm{oz}=6$ grams | 2 fluid ounces |  |  |  |
| $28-31$ | $0.233 \mathrm{oz}=7$ grams | 2 fluid ounces |  |  |  |
| $32-35$ | $0.267 \mathrm{oz}=8$ grams | 2 fluid ounces |  |  |  |
| $36-39$ | $0.3 \mathrm{oz}=9$ grams | 2 fluid ounces |  |  |  |
| 40 or greater | $0.33 \mathrm{oz}=10$ grams | 2 fluid ounces |  |  |  |

Step 5. Use a regular measuring cup to measure out exactly the required amount of treatment mixture for the tree and put it into a larger pouring container. Then add more water to the pouring container to make it easier to distribute the material evenly around the tree, as follows:

For trees up to 12 " in diameter, add one gallon of water.
Add one more pint of water for every inch of diameter over 12.
Step 6. Pour the treatment mixture into the holes and all around the base of the tree slowly to avoid runoff and be sure to use it all up on the intended tree. When you're finished treating each tree, mark it to indicate it's been treated. Give the treatment time to dry before children or pets are allowed in the area.
