## Applying Safari 20 SG by Trunk Spray - Master Batch

| IMPORTANT |
| :---: |
| Use the specially marked measuring cup that comes with your |
| purchase of Safari to medsure the required amount of product and a |
| regular measuring cup to theasure the amount of water. Note that the |
| numbers printed on the special measuring cup refer to ounces of weight |
| of Safari 20 SG and are eot the same as fluid ounces of volume in a |
| regular measuring cup. |

CONVERSION FACTOR
If you don't have the special measuring cup, you can use
a regular measuring cup with the following conversion
factor for Safari 20 SG:
8 fl. oz. by volume in a regular measuring cup
$=4$ oz. by weight in the Safari measuring cup.

Wear long sleeved shiitt, long pants, shoes and socks, goggles, gloves, and mask while spraying.
Step 1. To make a master batch of treatment mixture, put the required amount of water in a mixing container first. Warm water works best. Then add the corresponding amount of product shown in the Mixing chart below and shake well until all treatment mater al is dissolved.

|  | MIXING THE MASTER BATCH |  |
| :---: | :---: | :---: |
| $\boldsymbol{A m o u n t ~ o f ~ P r o d u c t ~}$ | Amount of Water |  |
| 3.5 ounces | 32 fluid ounces ( 1 qt$)$ |  |
| 7 ounces | 64 fluid ounces ( 2 qts$)$ |  |
| 10.5 ounces | 96 fluid ounces (3 qts) |  |
| 12 ounces | 110 fluid ounces |  |
| 14 ounces | 128 fluid ounces ( 1 gal$)$ |  |

Step 2. Measure the trunk diameter of the tree at breast height. This is called "inches dbh."
Step 3. Treatment is done on an individual tree basis. Use the Dosing table below to determine how many ounces of treatment mixture the tree needs by multiplying its trunk diameter by the number of ounces shown in the right-hand column. Use a regular measuring cup to measure out exactly the required amount of treatment mixture for the tree and pour it into the sprayer.

| DOSING EACH TREE |  |
| :---: | :---: |
| Inches (DBH) | Oz of TREATMENT MIXTURE PER INCH DBH |
| $1-15$ | 1 ounce |
| $16-19$ | 1.33 ounces |
| $20-23$ | 1.67 ounces |
| $24-27$ | 2 ounces |
| $28-31$ | 2.33 ounces |
| $32-35$ | 2.67 ounces |
| $36-39$ | 3 ounces |
| 40 or greater | 3.33 ounces |

Step 4. Set the sprayer for low pressure (10-15 psi) and adjust the nozzle for a spray about 3-4 inches wide (not a stream and not a mist). Position the nozzle 2 inches from the trunk and spray from $51 / 2$ feet above the ground to 6 inches above the ground. Do this very slowly to avoid back-splash and allow the treatment material to be absorbed into the bark; try not to let it drip down onto the ground if the tree is immediately next to a waterway or other sensitive area. Spray until the sprayer is empty so you use all of the treatment mixture on the intended tree.
NOTE: If the spray is too foamy, you can add a cup or two of water in the sprayer tank after you've loaded the required amount of treatment mixture into it.

Step 5. When you're finished treating each tree, mark it to indicate it's been treated. Give the treatment time to dry before children or pets are allowed in the area.
