

Applying Imidacloprid 4F (42.3% Flowable) by Nu-Arbor 1-Two Root Injector

The Nu-Arbor injector holds up to 4 gallons of solution and dispenses a standard 1/4 ounce of solution with each stroke.

Step 1. Judge whether the soil moisture level is moderate to wet or dry to normal. If you're in doubt about soil moisture level, you should default to the "Dry to Normal Soil" instructions when applying 4F by injector.

Step 2. To make a batch of solution, follow the proportions of water and amount of product shown in the Mixing chart below. Put the water and chemical in a mixing container and shake well.

MIXING		
Amount of Product	Amount of Water for Moderate to Wet Soil	Amount of Water for Dry to Normal Soil
1 fl oz	6 fl oz Each fl oz of this mixture contains 2 grams of active ingredient.	13 fl oz Each fl oz of this mixture contains 1 gram of active ingredient.
9 fl oz	54 fl oz	117 fl oz (3qt + 21 oz)
18 fl oz	108 fl oz (3 qt + 12 oz)	234 fl oz (1 gal + 106 oz)
27 fl oz	162 fl oz (1 gal + 34 oz)	351 fl oz (2 gal + 95 oz)
36 fl oz	216 fl oz (1 gal + 88 oz)	468 fl oz (3 gal + 84 oz)

Step 3. Measure the trunk diameter of the tree at breast height. This is called "inches dbh."

Step 4. Rake back any leaf litter, duff or debris from the base of the tree so that bare soil is accessible. At a distance of **no more than 12 inches from the base of the tree**, make one injector hole in the soil for each inch of trunk diameter. The holes should be evenly spaced around the tree and **no deeper than 2-4 inches**.

Note: For trees smaller than 4 inches in diameter, make a minimum of 4 shallow holes around the tree.

Step 5. Based on the trunk diameter, pump the injector handle the number of times shown in the Dosing chart below. **Be sure to stay in the same moisture level column as you used for mixing.**

DOSING			
Inches (DBH)	Strokes per Inch DBH for Moderate to Wet Soil	Strokes per Inch DBH for Dry to Normal Soil	Active Ingredient per Inch DBH
1-11	1 stroke / hole	2 strokes / hole	.5 gram
12-18	1.5* strokes / hole	3 strokes / hole	.75 gram
19-22	2 strokes / hole	4 strokes / hole	1 gram
>22 should be treated two consecutive years.	3 strokes / hole	6 strokes / hole	1.5 grams

* To get the equivalent of 1.5 pumps per hole, do 1 pump in half the holes and 2 pumps in the other half, distributing these two levels evenly around the tree. Or do 1 1/2 times the number of holes per inch DBH and do 1 pump per hole.

Step 6. When you're finished treating each tree, mark it to indicate it's been treated. When finished working, triple rinse injector as described in "Introduction to Treating Hemlocks."
